

Everything about the Vibe .50 screams performance. The sleek, narrow profile reduces drag for smoother, faster backward flight. A dual-stacked frame, similar to the 90 model, creates an exceptionally rigid structure vital for mind-bending maneuvers. Fact is, many of the drivetrain parts are directly from the Vibe 90, resulting in an incredibly strong 50 model. The 120/140 CCPM, so vital to precise handling, has been faithfully reproduced to assure flying qualities that will be a superb combination of precision and pizzazz. And the engine gear ratio is optimized to allow the YS/OS engines to develop great horsepower.

While the new Vibe may be the most potent JR 50 heli ever, JR's legendary quality and ease of operation make your Vibe a joy to build and service.

FXHeli.com has worked closely with the distributors and manufacturer to get the best possible deals available on this awesome helicopter. Stocks are limited so, get in today! *(Payment plans available)*
